

# Introducing the Adolescent Transition Program

**Supports adolescents aged 15+ to transition between paediatric and adult developmental services**

Families of adolescents with communication, physical and developmental needs should start transition planning at age 15 to prepare for critical applications at ages 16 and 18. The Adolescent Transition Program focuses on four goal areas: financial support, community connection, youth independence and peer support. A comprehensive Toolkit is available for youths and caregivers, reviewing steps required to transition to adult services.
