Virtual Hand-Arm Assessments for Children with Cerebral Palsy

Help us improve access to healthcare for children with Cerebral Palsy (CP)! This study looks at how virtual hand-arm assessments compare to in-person assessments for children with CP by comparing results obtained in the clinic versus at home.

Participation in this study will last 3-4 weeks, and consists of two virtual assessments, one in-person assessment at Grandview Kids, and completion of study surveys at home.

Who can participate?

We are looking for kids who:

- Are between 6-17 years old
- Have a diagnosis of Cerebral Palsy
- Handles objects either (1) easily, possibly with some limitations **OR** (2) mostly, but with somewhat reduced ease **OR** (3) with difficulty
- Have a caregiver willing to participate and can answer questions about preferences
- Have an appropriate device and internet access for video conferencing

You and your child will each receive a \$45 gift card for participating, and a \$25 gas gift card for travel expenses

To ask questions or to sign up, please contact:

Shantel Mangroo, Program Manager, Research, Innovation and Knowledge Mobilization, at Research@grandviewkids.ca

Gayathiri Rajkumar, Research Coordinator, at Gayathiri.Rajkumar@grandviewkids.ca
